# Regulatory Update - Ecuador

## Minimum requirements for Type Approval of devices with 2G/3G/4G

The Ecuador Regulator, *Agencia de Regulación y Control de las Telecomunicaciones (ARCOTEL)*, have advised that for future Type Approval applications, devices with 2G/3G function must operate in at least the 850MHz and 1900MHz bands and devices with 4G function must operate in at least LTE bands 2 and 4, otherwise Type Approval cannot be obtained in Ecuador.

PCS have been advised that ARCOTEL are working on a new Type Approval regulation which we believe will incorporate this requirement, however its confirmed scope and a time-frame for its issuance is currently unknown. PCS will continue to monitor developments closely and will keep customers updated once an official publication is released.
