Regulatory Update - Uruguay

LTE band 28 (700MHz) is now permitted

Uruguyan Regulator, *Unidad Reguladora de Servicios de Comunicaciones (URSEC)*, have advised that since August 2015, LTE band 28 (700MHz) is now open. As such, this band can be listed in all new Type Approval certificates for devices which have this functionality.

For new Type Approval applications for devices with LTE band 28 functionality, it will be necessary to provide the RF report for LTE band 28 (Tx 703-748 MHz / Rx 758-803 MHz) in order to obtain Approval.

For devices already Approved but which can operate in LTE band 28, URSEC have advised that no action is needed and existing Type Approval certificates remain valid. It is not obligatory to re-apply for Type Approval or update the existing Type Approval certificate to include this band, however a new Application may be filed at the manufacturer's request.

URSEC has yet to publish official confirmation on their website regarding the regulation of this band, however PCS will keep customers updated of any further developments and publications.
