

ISONRG ML311

This heat meter, when configured as detailed below, has been independently verified by Kiwa as suitably compliant with the Measuring Instruments Directive for the purposes of claiming the Renewable Heat Incentive.

Manufacturer:
ISOIL INDUSTRIA SPA

Distributor:
ISOIL INDUSTRIA SPA

Brand name:
ISONRG

Model name:
ML311

Additional Notes

ISONRG - ML311 is a heat meter available to be connected to any kind of ultrasonic, electromagnetic or mechanical flow sensor (turbine, woltmann) with a pulse or analogic output. It has to be supplied by 24 Vdc or ac and 220Vac.

It can have pulses, analogic, MODbus, BACnet, Mbus, N2 etc outputs and protocols to transfer data.

It can also be used for heat, cold or both types. Moreover it can calculate the thermal energy for water or glycol (polypropylene or ethylene).

Therefore it is a modular device for heating and cooling systems for any kind of appliance.

In combination with ISOIL INDUSTRIA IFX-M4-01 and PLT temperature probes this can be used as an RHI compliant heat meter.
